AQ5.4: Activity Questions 4 - Not Graded

This assignment will not be graded and is only for practice.
Let $T(x, y, z) = mx + ny + pz$T(x, y, z) = mx + ny + pz denote the total amount of money a multiplex made from a specific movie, in one day by selling xx number of tickets for the morning show, yy number of tickets for the evening show, and zz number of tickets for the night show, where mm, nn and pp are the prices of each ticket of that movie in the morning, evening, and night show, respectively.

In the multiplex, 2 Malayalam movies, 1 Hindi movie, 1 Bengali movie, and 1 English movie are running parallelly in one week. Suppose there are 3 shows (Morning, Evening, Night) per day for each of the Malayalam movies and the English movie, whereas 2 shows (Evening, Night) per day for the Hindi and the Bengali movie. Ticket price (irrespective of morning, evening, and night shows) for each Malayalam movie is ₹200, Hindi movie is ₹250, Bengali movie is ₹250, and English movie is ₹300. The number of tickets sold in a particular day is given in Table M2W5AQ2:

Answer questions 1 to 8 using the given data above.

Level 1

1 point
Which expression accurately expresses the total amount of money the multiplex made in the specific day mentioned above by selling the tickets of the morning shows only?

- $200m_1 + 200m_2 + 200m_3$200m1 + 200m2 + 200m3
- $200m_1 + 250m_1^{'} + 300e_1$200m1 + 250m1′ + 300e1
- $200m_1 + 200m_1^{'} + 250e_1$200m1 + 200m1′ + 250e1
- $200m_1 + 200m_1^{'} + 300e_1$200m1 + 200m1′ + 300e1

No, the answer is incorrect.
