AQ4.3: Activity Questions 3 - Not Graded

This assignment will not be graded and is only for practice.
Level 1

1 point
The dimension of a vector space is the :
- [ ] Cardinality of any spanning set.
- [ ] Cardinality of a basis.
- [ ] Cardinality of minimal spanning set.
- [ ] Cardinality of maximal linearly independent set.

No, the answer is incorrect.
Score: 0
Accepted Answers:
Cardinality of a basis.
Cardinality of minimal spanning set.
Cardinality of maximal linearly independent set.

1 point
Match the sets of vectors in column A with their properties of linear dependence or independence in column B and the dimension of the vector spaces in column C spanned by the sets.

- [ ]
a → → ii → → 3, b → → iii → → 2
- [ ]
c → → iii → → 2, d → → iv → → 1
- [ ]
a → → ii → → 4, b → → i → → 3
- [ ]
c → → iv → → 1, d → → iii → → 2

No, the answer is incorrect.

c → → iv → → 1, d → → iii → → 2

1 point
Choose the set of correct options.
- [ ]
The dimension of the vector space $M_{1\times 2}(R)$M1×2(R) is 2.
- [ ]
The dimension of the vector space $M_{2\times 1}(R)$M2×1(R) is 1.
- [ ]
The dimension of the vector space $M_{3\times 3}(R)$M3×3(R) is 3.
- [ ]
A basis of $M_{2\times 2}(R)$M2×2(R) is the set {[$\begin{smallmatrix}1&0\\0&0\end{smallmatrix}$]{[1000], [$\begin{smallmatrix}0&1\\0&0\end{smallmatrix}$][0010], [$\begin{smallmatrix}0&0\\1&0\end{smallmatrix}$][0100], [$\begin{smallmatrix}0&0\\0&1\end{smallmatrix}$]}[0001]}

No, the answer is incorrect.

Accepted Answers:
The dimension of the vector space $M_{1\times 2}(R)$M1×2(R) is 2.

A basis of $M_{2\times 2}(R)$M2×2(R) is the set {[10 00]{[1000], [01 00][0010], [00 10][0100], [00 01]}[0001]}

1 point
Consider the following sets:

- V_1 = {A | $A \in M_{2\times 2}(R)$ and A is a symmetric matrix, i.e., $A = A^T$ }V1 = {A | A ∈ M2×2 (R) and A is a symmetric matrix, i.e., A = AT }
- V_2 = {A | $A \in M_{2\times 2}(R)$ and A is a scalar matrix}V2 = {A | A ∈ M2×2 (R) and A is a scalar matrix}
- V_3 = {A | $A \in M_{2\times 2}(R)$ and A is a diagonal matrix}V3 = {A | A ∈ M2×2 (R) and A is a diagonal matrix}
- V_4 = {A | $A \in M_{2\times 2}(R)$ and A is an upper triangular matrix}V4 = {A | A ∈ M2×2 (R) and A is an upper triangular matrix}
- V_5 = {A | $A \in M_{2\times 2}(R)$ and A is a lower triangular matrix}V5 = {A | A ∈ M2×2 (R) and A is a lower triangular matrix}

All V_i, i = 1, 2, 3, 4, 5Vi, i = 1, 2, 3, 4, 5 are subspaces of the vector space $M_{2\times 2}(R)$M2×2(R).
Choose the set of correct options.

- [ ] The dimension of V_1 V1 is 3.
- [ ] The dimension of V_2 V2 is 3.
- [ ] The dimension of V_3 V3 is 1.
- [ ] The dimension of V_4 V4 is 3.
- [ ] The dimension of V_5 V5 is 3.

No, the answer is incorrect.

Accepted Answers:
The dimension of V_1 V1 is 3.
The dimension of V_4 V4 is 3.
The dimension of V_5 V5 is 3.

1 point
Consider the following two matrices M_1 M1 and M_2 M2.

$$M_1 = [1432 2314 3421], M_2 = [1000 1010 0101]\text{M1} = \begin{bmatrix} \\ \\ \\ \end{bmatrix}123434312241\text{, M2} = \begin{bmatrix} \\ \\ \\ \end{bmatrix}110001010001$$

Choose the correct set of options.

- [ ] The row rank of both the matrices, M_1 M1 and M_2 M2, is 2.
- [ ] The row rank of both the matrices, M_1 M1 and M_2 M2, is 3.
- [ ] The column rank of M_1 M1 is 4, but the column rank of M_2 M2 is 3.
- [ ] The column rank of M_2 M2 is 4, but the column rank of M_1 M1 is 3.
- [ ]

The column rank of both the matrices, M_1 M1 and M_2 M2, is 4.

The column rank of both the matrices, M_1 M1 and M_2 M2, is 3.

No, the answer is incorrect.

Score: 0

Accepted Answers:

The row rank of both the matrices, M_1 M1 and M_2 M2, is 3.

The column rank of both the matrices, M_1 M1 and M_2 M2, is 3.

Level 2

Find the dimension of the vector space $V = \{A \mid$ sum of entries in each row is 0, and $A \in M_{3\times 2}(R)\}$.V = {A ∣ sum of entries in each row is 0, and A ∈ M3×2(R)}.

No, the answer is incorrect.

1 point

Choose the set of correct options.

If $S \subset R^2$ S ⊂ R2 contains three vectors, then vectors in SS must be linearly independent.

If $S \subset R^3$ S ⊂ R3 contains three vectors, then vectors in SS may or may not be linearly independent.

If $S \subset R^4$ S ⊂ R4 contains five vectors, then vectors in SS must be linearly dependent.

If $S \subset R$S ⊂ R contains one vector, then the vector in SS must be linearly dependent.

No, the answer is incorrect.
