

AQ1.5: Activity Questions 5 - Not Graded

This assignment will not be graded and is only for practice.

5.1 Level 1:

1 point

Choose the set of correct options

☐

If AA is a real $3 \times 3 \times 3$ matrix, then $\det(A) = \det(A^T)\det(A) = \det(AT)$.

☐

If $A = [a_{ij}]$ $A = [a_{ij}]$ is a real $4 \times 4 \times 4$ matrix, then the order of the sub matrix obtained by deleting the ii -th row and jj -th column of AA is $4 \times 4 \times 4$.

☐

If $A = [a_{ij}]$ $A = [a_{ij}]$ is a real $4 \times 4 \times 4$ matrix, then the order of the sub matrix obtained by deleting the ii -th row and jj -th column of AA is $3 \times 3 \times 3$.

☐

If AA is a real $3 \times 3 \times 3$ matrix, then the orders of all possible square sub matrices of AA are 1×1 , 2×2 , and 3×3 .

No, the answer is incorrect.

If all the elements of a $3 \times 3 \times 3$ real matrix AA are the same, then which of the following is (are) correct?

☐

Determinant of matrix AA is 00.

☐

Determinant of matrix AA cannot be determined from the given information.

☐

Determinant of matrix AA will be the sum of the elements of a row.

☐

Determinant of matrix $A + A^T A + AT$ is 00, where $A^T AT$ denotes the transpose of AA .

☐

Determinant of matrix $A + A^T A + AT$ cannot be determined from the given information, where $A^T AT$ denotes the transpose of AA .

No, the answer is incorrect.

Choose the set of correct options

☐

If two rows are the same in a $3 \times 3 \times 3$ real matrix, then the determinant of that matrix is zero.

☐

If two columns are the same in a $3 \times 3 \times 3$ real matrix, then the determinant of that matrix is zero.

☐

If one row is a non-zero multiple of another row in a $3 \times 3 \times 3$ real matrix, then the determinant of that matrix is not zero.

☐

If one column is a non-zero multiple of another column in a $3 \times 3 \times 3$ real matrix, then the determinant of that matrix is zero.

No, the answer is incorrect.

Let A, B, A, B , and C be 3×3 real matrices. Which of the following options is (are) correct?

☐

$\det(ABC) = \det(A)\det(B)\det(C)$

☐

$\det(A^3) = \det(A)^3$

☐

$\det(A + B + C) = \det(A) + \det(B) + \det(C)$

☐

$\det(AB^T) = \det(A)\det(B)$, where B^T denotes the transpose of B .

No, the answer is incorrect.

Let $A = [\delta_{ij}]$ be a matrix of order 3×3 such that $\delta_{ij} = \begin{cases} 0 & \text{if } i > j \\ 1 & \text{if } i \leq j \end{cases}$

Choose the set of correct options

[Hint: Write down matrix A first.]

☐

A is an upper triangular matrix.

☐

A is a lower triangular matrix.

☐

$\det(A) = 6$

☐

$\det(A) = 3$

No, the answer is incorrect.

Score: 0

Accepted Answers:

AA is an upper triangular matrix.

$$\det(A) = 6\det(A) = 6$$

1 point

Let $A = [\delta_{ij}]$ be a matrix of order 3×3 such that $\delta_{ij} = \begin{cases} 0 & \text{if } i < j \\ 2 & \text{if } i \geq j \end{cases}$

Choose the set of correct options

☐

AA is an upper triangular matrix.

☐

AA is a lower triangular matrix.

☐

$$\det(A) = 2\det(A) = 2$$

☐

$$\det(A) = 8\det(A) = 8$$

No, the answer is incorrect.

Score: 0

Accepted Answers:

AA is a lower triangular matrix.

$$\det(A) = 8\det(A) = 8$$

Suppose $A = \begin{bmatrix} 4 & -13 \\ 2 & 0 \\ 3 & -20 \end{bmatrix}$ and C_{ij} is the (i, j) -th cofactor of the matrix AA .

Let BB be 3×3 matrix where (i, j) -th entry is equal to C_{ij} . Find $\det(B)$.

No, the answer is incorrect.
