

AQ1.3: Activity Questions 3 - Not Graded

This assignment will not be graded and is only for practice.

3.1 Level 1:

Consider a system of linear equations (System 1):

$$\begin{aligned} -2x_1 + 3x_2 + x_3 &= 1 \\ -x_1 + x_3 &= 0 \\ 2x_2 &= 5 \end{aligned}$$

Answer questions 1 and 2 based on the above data.

1 point

If the matrix representation of system (1) is $Ax = b$, where $x = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix}$, then

$$A = \begin{bmatrix} -2 & 3 & 1 \\ -1 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix}, \text{ and } b = \begin{bmatrix} 1 \\ 0 \\ 5 \end{bmatrix}$$

$$b = \begin{bmatrix} 5 \\ 0 \\ 1 \end{bmatrix}$$

$$A = \begin{bmatrix} -2 & -10 \\ 3 & 0 & 2 \\ 1 & 1 & 0 \end{bmatrix}, \text{ and } b = \begin{bmatrix} 1 \\ 0 \\ 5 \end{bmatrix}$$

$$A = \begin{bmatrix} -2 & 3 & 1 \\ -1 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix}, \text{ and } b = \begin{bmatrix} 1 \\ 0 \\ 5 \end{bmatrix}$$

Yes, the answer is correct.

$$A = \begin{bmatrix} -2 & 3 & 1 \\ -1 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix} A = \begin{bmatrix} -2 & 3 & 1 \\ -1 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix}, \text{ and } b = \begin{bmatrix} 1 \\ 0 \\ 5 \end{bmatrix} b = \begin{bmatrix} 1 \\ 0 \\ 5 \end{bmatrix}$$

1 point

System (1) has

[Hint: Solve for x_1, x_2, x_1, x_2 , and $x_3 x_3$.]

- ☒ a unique solution.
☐ no solution.
☐ infinitely many solutions.
☐ None of the above.

Yes, the answer is correct.

Score: 1

Accepted Answers:

a unique solution.

1 point

Choose the set of correct options.

[Hint: Think of AA as a 2×2 or $3 \times 32 \times 2$ or 3×3 matrix, and bb accordingly.]

- ☒ Every system of linear equations has either a unique solution, no solution or infinitely many solutions.
☐

If each equation of a system of linear equations is multiplied by a non-zero constant c , then the solution of the new system of equations is c times the solution of the old system of equations.

If $Ax = b$ is a system of linear equations which has a solution, then the system of linear equations $cAx = bcAx = b$, where $c \neq 0$, will also have a solution.

If $Ax = b$ is a system of linear equations which has a solution, then $\frac{1}{c}Ax = \frac{1}{c}b$, where $c \neq 0$, will also have a solution.

Yes, the answer is correct.

1 point

The Plane 1 and Plane 2 in Figure M2W1AQ3, correspond to two different linear equations, which form a system of linear equations.

The above system of linear equations has

[Hint: If a system of linear equations has a solution, then the point corresponding to the solution must lie on each plane corresponding to each linear equation of the given system.]

- ☐ a unique solution.
☒ no solution.
☐ infinitely many solutions.
☐ None of the above.

No, the answer is incorrect.

Consider the geometric representations (Figures (a), (b), (a), (b), and (c(c))) of three systems of linear equations.

Choose the set of correct options.

Figure (a)(a) represents a system of linear equations which has no solution.

Figure (a)(a) represents a system of linear equations which has infinitely many solutions.

Figure (b)(b) represents a system of linear equations which has a unique solution.

Figure (b)(b) represents a system of linear equations which has infinitely many solutions.

Figure (c)(c) represents a system of linear equations which has infinitely many solutions.

Figure (c)(c) represents a system of linear equations which has no solution.

Yes, the answer is correct.

Figure (c)(c) represents a system of linear equations which has infinitely many solutions.

3.2 Level 2:

1 point

Consider a system of equations:
$$\begin{aligned} 2x_1 + 3x_2 &= 6 \\ -2x_1 + kx_2 &= d \\ 4x_1 + 6x_2 &= 12 \end{aligned}$$
 Choose

the set of correct options.

$Ax = b$ represents the above system, where $x = \begin{bmatrix} x_1 \\ x_2 \end{bmatrix}$, $A = \begin{bmatrix} 2 & 3 \\ -2 & k \\ 4 & 6 \end{bmatrix}$, $b = \begin{bmatrix} 6 \\ d \\ 12 \end{bmatrix}$

and $b = \begin{bmatrix} 6 \\ d \\ 12 \end{bmatrix}$

The system has no solution if $k = -3$, $d = 0$.

The system has a unique solution if $k = 3$, $d = 0$.

The system has infinitely many solutions if $k = -3$, $d = 6$.

The system has infinitely many solutions if $k = -3$, $d = -6$.

No, the answer is incorrect.

The system has a unique solution if $k = 3$, $d = 0$.

The system has infinitely many solutions if $k = -3$, $d = -6$.

1 point

Let x_1 and x_2 be solutions of the system of linear equations $Ax = b$. Which of the following options are correct?

$x_1 + x_2$ is a solution of the system of linear equations $Ax = b$.

$x_1 + x_2$ is a solution of the system of linear equations $Ax = 2b$.

$x_1 - x_2$ is a solution of the system of linear equations $Ax = b$.

$x_1 - x_2$ is a solution of the system of linear equations $Ax = 0$.

No, the answer is incorrect.

1 point

Consider two system of linear equations:

System 1:

$$\begin{matrix} x_1 + 2x_2 = -5 \\ 0x_1 - x_2 = 5 \end{matrix} \quad \begin{matrix} x_1 + 2x_2 = -5 \\ x_1 - x_2 = -5 \end{matrix}$$

System 2:

$$\begin{matrix} -2x_3 + x_4 = -5 \\ 3x_3 + x_4 = 5 \end{matrix} \quad \begin{matrix} -2x_3 + x_4 = -5 \\ 3x_3 + x_4 = 5 \end{matrix}$$

Suppose there is another system of linear equation given by

$$\begin{matrix} (1-2)(x_1 + x_3) + (2+1)(x_2 + x_4) = m \\ (0+3)(x_1 + x_3) + (-1+1)(x_2 + x_4) = n \end{matrix} \quad \begin{matrix} (1-2)(x_1 + x_3) + (2+1)(x_2 + x_4) = m \\ (0+3)(x_1 + x_3) + (-1+1)(x_2 + x_4) = n \end{matrix}$$

$$(-1+1)(x_2 + x_4) = m = n$$

for some real values of m and n . Find the value of $n - m$.

No, the answer is incorrect.
