Solve with us 5 - Not Graded

This assignment will not be graded and is only for practice.
1. Key points:1. Key points:

- Rank of a matrix:
  - Maximum number of linearly independent column vectors (or row vectors) in a matrix.

  NOTE: Rank of a matrix is always less than or equal to the number of columns (or rows).

- How to find rank of a matrix A:
  - Reduce the matrix to row echelon form.
  - Find the number of non zero rows in the reduced matrix which will be the rank of the matrix A.

1 point
Consider the following two matrices:

$$P = \begin{bmatrix} 1 & 0 & 3 \\ 2 & -2 & 0 \\ 0 & 1 & -1 \end{bmatrix} \begin{bmatrix} 1 & 2 & 0 & 0 \\ 0 & -1 & 2 & 3 \\ 0 & 1 & -1 & 1 \end{bmatrix} ; Q = \begin{bmatrix} 1 & 1 & -2 & 0 \\ 1 & 0 & 2 & 0 \\ 0 & -1 & 0 & 4 \end{bmatrix} \begin{bmatrix} 1 & 1 & 0 & 0 \\ 1 & -1 & -2 & 2 \\ 0 & 0 & 0 & 4 \end{bmatrix}$$

Which of the following statements is (are) TRUE? [Hint: Try to reduce the matrices to row echelon form and find the number of non zero rows]

- ☐ Rank(P) = 4
- ☐ Rank(P) = Rank(Q)
- ☐ Rank(QP) = 4
- ☐ Rank(PQ) = Rank(QP)

No, the answer is incorrect.
Score: 0
Accepted Answers:
Rank(P) = Rank(Q)
Rank(PQ) = Rank(QP)

2 Key points:2 Key points:

- Null space of a matrix AA:
  - Let AA be an $m \times n$m × n matrix. The subspace W = $\{x \mid x \in R^n, Ax = 0\}$ $\{x \mid x \in Rn, Ax = 0\}$ is called the null space of AA.
  - The dimension of the null space W is called the nullity of AA.

- Rank-Nullity theorem:
  - Let AA be an $m \times n$m × n matrix, then rank(AA) + nullity(AA) = nn.

Consider the following matrix:

$A = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ 0 & 0 & 0 \end{bmatrix}$A = $\begin{bmatrix} & & \\ & & \\ & & \end{bmatrix}$

Use the matrix AA to answer the following questions (2) and (3).

1 point

Which of the following vector space represents the null space of A?

◯ $\{(x_1, 0, x_2) | x_1, x_2 \in R\}$ {(x1, 0, x2) | x1, x2 ∈ R}

◯ $\{(0, x_1, 0) | x_1 \in R\}$ {(0, x1, 0) | x1 ∈ R}

◯ $\{(x_1, x_2, 0) | x_1, x_2 \in R\}$ {(x1, x2, 0) | x1, x2 ∈ R}

◯ $\{(0, 0, x_1) | x_1 \in R\}$ {(0, 0, x1) | x1 ∈ R}

No, the answer is incorrect.

Score: 0

Accepted Answers:

$\{(x_1, 0, x_2) | x_1, x_2 \in R\}$ {(x1, 0, x2) | x1, x2 ∈ R}

What will be the rank of the matrix AA?

[Hint: Find the nullity of AA and use Rank-Nullity theorem]

No, the answer is incorrect.

3 Key points:3 Key points:

Linear transformation:

A function ff from one vector space VV to another vector space WW ($f: V \longrightarrow W$f : V ⟶ W) is said to be a linear transformation if for any two vectors v_1 v1 and v_2 v2 in the vector space VV and for any $c \in R$c ∈ R (scalar) the following conditions hold:

(i) $f(v_1 + v_2) = f(v_1) + f(v_2)$f(v1 + v2) = f(v1) + f(v2)

(ii) $f(cv_1) = cf(v_1)$f(cv1) = cf(v1)

In a super market, the rates of a pen, a water bottle, a tooth brush, and a chocolate are ₹ 10, ₹ 40, ₹ 25, and ₹ 20 respectively. Suppose $T(x, y, z, w)$T(x, y, z, w) denotes the total cost of xx pens, yy water bottles, zz tooth brushes, and ww chocolates. Which of the following will be the correct expression for $T(x, y, z, w)$T(x, y, z, w)?

◯ $T(x, y, z, w) = x + y + z + w$T(x, y, z, w) = x + y + z + w

◯ $T(x, y, z, w) = 20x + 25y + 40z + 10w$T(x, y, z, w) = 20x + 25y + 40z + 10w

◯

$T(x, y, z, w) = (x + y + z + w)(10 + 40 + 25 + 20)$T (x, y, z, w) = (x + y + z + w)(10 + 40 + 25 + 20)

$T(x, y, z, w) = 10x + 40y + 25z + 20w$T (x, y, z, w) = 10x + 40y + 25z + 20w

No, the answer is incorrect.

Score: 0

Feedback:

Check whether by evaluating for particular values of x, y, z, w the function value matches the cost.

Accepted Answers:

$T(x, y, z, w) = 10x + 40y + 25z + 20w$T (x, y, z, w) = 10x + 40y + 25z + 20w
