

Week 7 - Graded Assignment 7

The due date for submitting this assignment has passed.

Due on 2026-04-01, 23:59 IST.

You may submit any number of times before the due date. The final submission will be considered for grading.

You have last submitted on: 2026-04-01, 07:55 IST

Note: This assignment will be evaluated after the deadline passes. You will get your score 48 hrs after the deadline. Until then the score will be shown as Zero.

Consider the vector spaces V and functions $\langle \cdot, \cdot \rangle : V \times V \rightarrow \mathbb{R}$ defined as follows:

i) $V = \mathbb{R}^2$ and $\langle (x_1, x_2), (y_1, y_2) \rangle = x_1 y_1 - x_2 y_1 - x_1 y_2 + 2x_2 y_2$. $\langle (x_1, x_2), (y_1, y_2) \rangle = x_1 y_1 - x_2 y_1 - x_1 y_2 + 2x_2 y_2$.

ii) $V = M_{2 \times 2}(\mathbb{R})$ and $\langle A, B \rangle = \text{Tr}(AB)$, $\langle A, B \rangle = \text{Tr}(AB)$, where $\text{Tr}(M)$ denotes the trace of a matrix M , i.e., the sum of the diagonal elements of M .

iii) $V = M_{2 \times 1}(\mathbb{R})$ and $\langle A, B \rangle = \text{Tr}(AB^t)$, $\langle A, B \rangle = \text{Tr}(AB^t)$, where $\text{Tr}(X)$ denotes the trace of a matrix X , i.e., the sum of the diagonal elements of X . Y^t denotes the transpose of matrix Y .

iv) $V = \mathbb{R}^2$ and $\langle (x_1, x_2), (y_1, y_2) \rangle = x_1 y_2 + x_2 y_1$. $\langle (x_1, x_2), (y_1, y_2) \rangle = x_1 y_2 + x_2 y_1$.

- ☒ (i) is an inner product.
- ☒ (ii) is an inner product.
- ☐ (iii) is an inner product.
- ☐ (iv) is an inner product.

No, the answer is incorrect.

Score: 0

Accepted Answers:

- (i) is an inner product.
- (iii) is an inner product.

Consider two linear transformations T and S from $\mathbb{R}^2 \rightarrow \mathbb{R}^2$ defined as $T(x, y) = (2x + y, x + y)$ and $S(x, y) = (x + cy, x + 2y)$. Let A and B be matrix representations of linear transformations T and S with respect to the standard bases of $\mathbb{R}^2$ respectively. Consider the following statements:

- P:** If $c = 1$, then A and B are similar matrices.
- Q:** If $c = 2$, then A and B are similar matrices.
- R:** If $c = 1$ and $P^{-1}AP = B$, then P can be the matrix $\begin{bmatrix} 1 & 0 \\ 1 & 1 \end{bmatrix}$.
- S:** If $c = 1$ and $P^{-1}AP = B$, then P can be the matrix $\begin{bmatrix} 1 & 2 \\ 1 & 1 \end{bmatrix}$.
- T:** If $c = 1$, then there are infinitely many P satisfying the equation $P^{-1}AP = B$.

Which of the following options are true?

- ☒ P is true but Q is false.
- ☐

Both P and QP and Q are true.

Both R and SR and S are true.

RR is false but SS is true.

TT is true.

Yes, the answer is correct.

Let $\langle \cdot, \cdot \rangle$ denote the standard inner product on $\mathbb{R}^2$, i.e., $\langle (x_1, x_2), (y_1, y_2) \rangle = x_1 y_1 + x_2 y_2$. Which one of the following options is (are) true for the vector $\gamma \in \mathbb{R}^2$, such that $\langle \alpha, \gamma \rangle = 4$ and $\langle \beta, \gamma \rangle = 8$, where $\alpha = (3, 1)$ and $\beta = (6, 2)$.

No such γ exists.

There are infinitely many such vectors which satisfy the properties of γ .

γ is unique in $\mathbb{R}^2$.

Any vector in the set $\{(t, 4 - 3t) \mid t \in \mathbb{R}\}$ satisfies the properties of γ .

$(1, 1)$ is the only vector which satisfies the properties of γ .

Yes, the answer is correct.

Let A and B be square matrices of the same order n . Which of the following statements are sufficient to conclude that A is equivalent to B .

☐ $\det(A) = \det(B)$.

☒ $\text{Nullity}(A) = \text{Nullity}(B)$.

☐

The set of columns of AA , and the set of columns of BB are both linearly dependent subsets of R^n R^n .

☒

There exists a matrix CC such that AA is equivalent to CC , and BB is equivalent to CC .

☒

There exist invertible matrices PP and QQ of order n such that $PA = BQ$ $PA = BQ$.

Yes, the answer is correct.
