

AQ6.2: Activity Questions 2 - Not Graded

This assignment will not be graded and is only for practice.

Level 1

1 point

Choose the set of correct options.

☐

If v_1 and v_2 are in the kernel of a linear transformation $T: V \rightarrow W$, where V and W are two vector spaces, then $v_1 + v_2$ will also be in the kernel of T .

☐

Kernel of a linear transformation $T: V \rightarrow W$ is a vector subspace of V , where V and W are two vector spaces.

☐

If w_1 and w_2 are in the image of a linear transformation $T: V \rightarrow W$, where V and W are two vector spaces, then $w_1 + w_2$ will also be in the image of T .

☐

Image of a linear transformation $T: V \rightarrow W$ is a vector subspace of W , where V and W are two vector spaces.

No, the answer is incorrect.

If v_1 and v_2 are in the kernel of a linear transformation $T: V \rightarrow W$, where V and W are two vector spaces, then $v_1 + v_2$ will also be in the kernel of T .

Kernel of a linear transformation $T: V \rightarrow W$ is a vector subspace of V , where V and W are two vector spaces.

If w_1 and w_2 are in the image of a linear transformation $T: V \rightarrow W$, where V and W are two vector spaces, then $w_1 + w_2$ will also be in the image of T .

Image of a linear transformation $T: V \rightarrow W$ is a vector subspace of W , where V and W are two vector spaces.

Consider the following linear transformation:

$$T: \mathbb{R}^3 \rightarrow \mathbb{R}^2$$

$$T(x, y, z) = (2x + 3z, 4y + z)$$

Answer questions 2,3,4 and 5, using the information given above.

1 point

Which of the following matrices corresponds to the given linear transformation T with respect to the standard ordered basis for $\mathbb{R}^3$ and the standard ordered basis for $\mathbb{R}^2$?

☐

$$\begin{bmatrix} 2 & 3 & 0 \\ 4 & 1 & 0 \end{bmatrix}$$

☐

$$\begin{bmatrix} 2 & 0 & 3 \\ 4 & 1 & 0 \end{bmatrix}$$

☐

$$\begin{bmatrix} 2 & 0 & 3 \\ 4 & 1 & 0 \end{bmatrix}$$

$$\begin{bmatrix} 24 \\ 31 \\ 00 \end{bmatrix} \begin{bmatrix} 230410 \end{bmatrix}$$

No, the answer is incorrect.

1 point

Choose the correct option.

T is an isomorphism.

T is one to one but not onto.

T is onto but not one to one.

T is neither one to one, nor onto.

No, the answer is incorrect.

Score: 0

Accepted Answers:

T is onto but not one to one.

1 point

Choose the set of correct options.

There exists a linear transformation $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ whose range is contained in the circle $x^2 + y^2 = 1$.

There exists a linear transformation $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ whose range equals the line $x = y$.

There exists a linear transformation $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ whose range is contained in the set $S = \{(x, y) \mid x > 0\}$.

There exists a linear transformation $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ whose range equals the line $y = \pi x$.

No, the answer is incorrect.
