

Solve with us 6.2 - Not Graded

This assignment will not be graded and is only for practice.

Key Points: 1Key Points: 1

- Let $T: V \rightarrow W$ be a linear transformation. We define kernel of T (denoted by $\ker(T)$) and image of T (denoted by $\text{Im}(T)$) as follows:

$$\text{Ker}(T) = \{v \in V \mid T(v) = 0\}$$

$$\text{Im}(T) = \{w \in W \mid \text{there exists } v \in V \text{ for which } T(v) = w\}$$

$$\{w \in W \mid \text{there exists } v \in V \text{ for which } T(v) = w\}$$

- T is injective (i.e., T is a monomorphism) if and only if $\text{Ker}(T) = \{0\}$.
- A linear transformation $T: V \rightarrow W$ is surjective (i.e., T is epimorphism) if and only if $\text{Im}(T) = W$.
- $\text{Nullity}(T) = \dim(\text{Ker}(T))$ and $\text{Rank}(T) = \dim(\text{Im}(T))$.
- Let $T: V \rightarrow W$ be a linear transformation. Then

$$\text{Rank}(T) + \text{Nullity}(T) = \dim(V).$$

This is known as the rank nullity theorem.

- Let $T: V \rightarrow W$ be a linear transformation. T is injective if and only if $\text{Nullity}(T) = 0$. T is surjective if and only if $\text{Rank}(T) = \dim(W)$.

Consider the following linear transformation:

$$T: \mathbb{R}^3 \rightarrow \mathbb{R}^2 \quad T: \mathbb{R}^3 \rightarrow \mathbb{R}^2$$

$$T(x, y, z) = (2x + 3z, 4y + z)$$

$$T(x, y, z) = (2x + 3z, 4y + z)$$

Answer the following questions:

1 point

Which of the following Options is true?

[Hint: $T(x, y, z) = (2x + 3z, 4y + z) = (0, 0)$ i.e., $2x + 3z = 0$ and $4y + z = 0$]

☐

$$\ker(T) = \{(3y, y, -4y) \mid y \in \mathbb{R}\}$$

☐

$$\ker(T) = \{(6y, y, 4y) \mid y \in \mathbb{R}\}$$

☐

$$\ker(T) = \{(6y, y, -4y) \mid y \in \mathbb{R}\}$$

☐

$$\ker(T) = \{(3y, y, 4y) \mid y \in \mathbb{R}\}$$

No, the answer is incorrect.

Key Points: 2 Key Points: 2

- Let $T: V \rightarrow W$ be a linear. Follow the steps below to find bases for the null space and the range space of T .

Step 1: Find the matrix A corresponding to T with respect to some standard ordered bases $\beta = \{v_1, v_2, \dots, v_n\}$ and $\gamma = \{w_1, w_2, \dots, w_m\}$ for V and W respectively.

Step 2: Use row reduction on A to obtain the matrix R which is in reduced row echelon form.

Step 3: The basis of the solution space of $Rx = 0$ is the basis of null space of matrix A and can be obtained by finding the pivot and non-pivot columns (dependent and independent variables) as seen earlier.

Step 4: The vectors $\begin{bmatrix} c_{11} \\ c_{12} \\ \vdots \\ c_{1n} \end{bmatrix}, \begin{bmatrix} c_{21} \\ c_{22} \\ \vdots \\ c_{2n} \end{bmatrix}, \dots, \begin{bmatrix} c_{k1} \\ c_{k2} \\ \vdots \\ c_{kn} \end{bmatrix}$ form a

basis of the null space of A precisely when the vectors $v'_1, v'_2, \dots, v'_k \in \ker(T)$ where $v'_i = \sum_{j=1}^n c_{ij} v_j$ form a basis for $\ker(T)$. Use the basis obtained in step 3 to thus get a basis for $\ker(T)$.

Step 5: Recall that if $i_1, i_2, \dots, i_r$ are the columns of R containing the pivot elements, then the same columns of A form a basis for the column space of A .

Step 6: The vectors $\begin{bmatrix} d_{11} \\ d_{12} \\ \vdots \\ d_{1m} \end{bmatrix}, \begin{bmatrix} d_{21} \\ d_{22} \\ \vdots \\ d_{2m} \end{bmatrix}, \dots, \begin{bmatrix} d_{r1} \\ d_{r2} \\ \vdots \\ d_{rm} \end{bmatrix}$

form a basis of the column space of AA precisely when the vectors $w'_1, w'_2, \dots, w'_r \in \text{im}(T)$, $w'_1, w'_2, \dots, w'_r \in \text{im}(T)$ where $w'_i = \sum_{j=1}^m d_{ij} w_j$, $w'_i = \sum_{j=1}^m d_{ij} w_j$, form a basis for $\text{im}(T)$. Use the basis obtained in step 5 to thus get a basis for $\text{im}(T)$.

Consider the following linear transformation:

$$T: R^3 \rightarrow R^3 \quad T: R^3 \rightarrow R^3$$

$$T(x, y, z) = (x - z, 2x + 3y + z, 3y + 3z) \quad T(x, y, z) =$$

$$(x - z, 2x + 3y + z, 3y + 3z)$$

Answer the following questions 7-9 using the information given above.

1 point

Which of the matrices corresponds the given linear transformation T with respect to the standard ordered basis of R^3 for both the domain and the codomain?

☐

$$\begin{bmatrix} 1 & 20 & 10 \\ 0 & 3 & -12 \\ -1 & 3 & 3 \end{bmatrix}$$

☐

$$\begin{bmatrix} 1 & 23 & 1 \\ -1 & 3 & 3 \\ 0 & 10 & 3 \end{bmatrix}$$

☐

$$\begin{bmatrix} 1 & -10 & 1 \\ 2 & 3 & 1 \\ 3 & 3 & 0 \end{bmatrix}$$

☐

$$\begin{bmatrix} 10 & -1 & 1 \\ 23 & 3 & 1 \\ 0 & 3 & 3 \end{bmatrix}$$

No, the answer is incorrect.
