

Week 11 - Graded Assignment 11

The due date for submitting this assignment has passed.

Due on 2026-04-29, 23:59 IST.

You may submit any number of times before the due date. The final submission will be considered for grading.

You have last submitted on: 2026-04-29, 11:51 IST

Note: This assignment will be evaluated after the deadline passes. You will get your score 48 hrs after the deadline. Until then the score will be shown as Zero.

Consider the following function

$$f(x, y, z) = x^2 z + y^3 e^{xy} + \sin(xyz). f(x, y, z) = x^2 z + y^3 e^{xy} + \sin(xyz).$$

Which of the following option(s) is (are) true?

$$f_{xx} = 2z + y^5 e^{xy} - yz \sin(xyz) f_{xx} = 2z + y^5 e^{xy} - yz \sin(xyz)$$

$$f_{xx} = 2z + y^5 e^{xy} - (yz)^2 \sin(xyz) f_{xx} = 2z + y^5 e^{xy} - (yz)^2 \sin(xyz)$$

$$f_{zy} = \cos(xyz) x^2 y z f_{zy} = \cos(xyz) x^2 y z$$

$$f_{xz} = 2x - x y^2 z \sin(xyz) f_{xz} = 2x - x y^2 z \sin(xyz)$$

Yes, the answer is correct.

Choose the correct statement(s) about $f(x, y) = \sqrt{x^2 + y^2} f(x, y) = x^2 + y^2$

f has no critical points.

$(0, 0)$ is the only critical point of f .

$(0, 0)$ is a local maximum of f .

$(0, 0)$ is a local minimum of f .

$(0, 0)$ is a global minimum of f .

Yes, the answer is correct.

Find the minimum value of the surface area of a rectangular box that has a volume of 1000 unit³.

Note: If x, y and z represent the lengths of the three sides of a rectangular box, then the surface area and volume are given by $2(xy + yz + zx)$ and xyz , respectively.

Consider a function $f(x, y, z) = x^3 + 3y^3 + z^3 - 4x - 6y - 4z$

$f(x, y, z) = x^3 + 3y^3 + z^3 - 4x - 6y - 4z$. If A is the Hessian matrix of $f(x, y, z)$ at $(0, 1, 1)$, then which of the following option(s) is(are) true?

$\det(A) = 0$

$\text{Rank}(A) = 2$

$\text{Nullity}(A) = 1$

$\det(A) = 648$

$\text{Rank}(A) = 3$

Yes, the answer is correct.

Consider the following function

$$f(x, y) = e^x + e^y - e^{x+y}$$

Which of the following option(s) is (are) true?

Hessian matrix of f at point $(1, 1)$ is $\begin{bmatrix} 1 - e & -e^2 \\ -e^2 & 1 - e \end{bmatrix}$.

Hessian matrix of f at point $(1, 1)$ is $\begin{bmatrix} e - e^2 & -e^2 \\ -e^2 & e - e^2 \end{bmatrix}$.

f has a point of maximum.

f has a saddle point.

Yes, the answer is correct.

(MSQ) Let $f: \mathbb{R}^2 \rightarrow \mathbb{R}$ be a multivariable function and $(x_0, y_0) \in \mathbb{R}^2$.

Consider the following statements:

- P: f is continuous at (x_0, y_0) .
- Q: The partial derivatives of f exist and are continuous in a neighborhood of (x_0, y_0) .
- R: The tangent plane to the graph of f exists at (x_0, y_0) .

Choose the correct statements from the following.

P implies that f is differentiable at (x_0, y_0) .

If f is differentiable at (x_0, y_0) , then P is satisfied.

Q implies that f is differentiable at (x_0, y_0) .

If f is differentiable at (x_0, y_0) , then Q is satisfied.

R implies that f is differentiable at (x_0, y_0) .

If f is differentiable at (x_0, y_0) , then R is satisfied.

Yes, the answer is correct.
