

## Practice Assignment 6 - Not Graded

This assignment will not be graded and is only for practice.

### Multiple Choice Questions (MCQ):

1 point

Which of the following statements are correct?

☐

There exists a linear transformation  $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$  such that  $T(2, 3) = (1, 2)$ ,  $T(1, -1) = (1, -1)$ , and  $T(4, 1) = (1, 0)$ .

☐

If there is a linear transformation  $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$  such that  $T(2, 3) = (1, 2)$ , and  $T(1, -1) = (1, -1)$ , then  $T(x, y) = \frac{1}{5}(4x - y, -x + 4y)$ .

☐

Let  $\beta = \{v_1, v_2, v_3\}$  and  $\gamma = \{2v_1 + v_3, v_2 - v_3, v_3 - v_1\}$  be bases of a vector space  $V$ . Consider a linear transformation  $T: V \rightarrow V$  such that  $T(v_1) = 2v_3 + v_1$ ,  $T(v_2) = 2v_1$ , and  $T(v_3) = 2v_2$ . The matrix representation of  $T$ , with respect to  $\beta$  and  $\gamma$  for the domain and codomain respectively, is

$$\begin{bmatrix} 1 & 2 & 2 \\ 0 & 0 & 2 \\ 1 & -2 & 3 \end{bmatrix}$$

☐

Let  $\{v_1, v_2, v_3\}$  be a basis of a vector space  $V$  and  $\{2v_1 + v_3, v_2 - v_3, v_3 - v_1\}$  be a basis of vector space  $W$ . Consider a linear transformation  $T: V \rightarrow W$  such that  $T(v_1) = 2v_3 + v_1$ ,  $T(v_2) = 2v_1$ , and  $T(v_3) = 2v_2$ . Then, the rank of  $T$  is 3.

**No, the answer is incorrect.**

### Multiple Select Questions (MSQ):

1 point

Consider the following two groups. In Group 1, there are 3 functions from one vector space to another, and in Group 2, there are three properties of functions. All the vector spaces have usual addition and scalar multiplication.

#### Group-1

- **P:**  $T: R^2 \rightarrow R^2$   $T: R^2 \rightarrow R^2$  such that  $T(x, y) = \begin{cases} (\frac{x^2}{y}, y) & \text{if } y \neq 0 \\ (x, 0) & \text{otherwise} \end{cases}$   $T(x, y) = \{ \mid \} \mid \{ (yx^2, y)$   
 $(x, 0)$  if  $y = 0$  otherwise
- **Q:**  $T: R^2 \rightarrow R^2$   $T: R^2 \rightarrow R^2$  such that  $T(x, y) = (x, xy)$   $T(x, y) = (x, xy)$
- **R:**  $T: R^3 \rightarrow R^3$   $T: R^3 \rightarrow R^3$  such that  $T(x, y, z) = \frac{x+y+z}{5}T(x, y, z) = 5x+y+z$

#### Group-2

- 1:  $T(v_1 + v_2) = T(v_1) + T(v_2)$   $T(v_1 + v_2) = T(v_1) + T(v_2)$  for all  $v_1, v_2 \in V$   $v_1, v_2 \in V$
- 2:  $T(c v) = c T(v)$   $T(c v) = c T(v)$  for all  $v \in V$   $v \in V$  and  $c \in R$   $c \in R$ .
- 3:  $T$  is a linear transformation

Choose the set of correct options.

- ☐ P satisfies 1 but not 2.
- ☐ P satisfies 2 but not 1
- ☐ Q satisfies 1
- ☐ Q satisfies 3
- ☐ P satisfies 3
- ☐ R satisfies 2
- ☐ R satisfies 3
- ☐ R satisfies 1 but not 2

**No, the answer is incorrect.**

Let  $T$  and  $S$  be two linear transformations from  $R^3$  to  $R^3$ , which are defined as follows:

$$T: R^3 \rightarrow R^3 \quad T: R^3 \rightarrow R^3 \quad S: R^3 \rightarrow R^3 \quad S: R^3 \rightarrow R^3$$

$$T(x, y, z) = (x - y, y - z, z - x) \quad T(x, y, z) = (x - y, y - z, z - x)$$

$$S(x, y, z) = (x + y, y + z, z + x) \quad S(x, y, z) = (x + y, y + z, z + x)$$

Let  $S + T$  be defined to be the linear transformation as follows:

$$(S + T): R^3 \rightarrow R^3 \quad (S + T): R^3 \rightarrow R^3$$

$$(S + T)(x, y, z) = S(x, y, z) + T(x, y, z) \quad (S + T)(x, y, z) = S(x, y, z) + T(x, y, z)$$

Let  $CC$  be the matrix representation of  $S + T$  with respect to the standard ordered bases of  $R^3$ . If  $C = nI$ , where  $I$  denotes the identity matrix of order 3, then what will be the value of  $n$ ?

### Comprehension Type Question:

For each video on YouTube, consider the vector (Number of comments in thousands, Number of shares in thousands, Number of views in thousands) and consider the subset  $S$  of  $R^3$  consisting of these vectors. It is known that the ranking of a YouTube video can be thought of as the restriction of a linear transformation  $T: R^3 \rightarrow R$  to  $S$  where  $R^3$  comes with usual addition and scalar multiplication. (assume ranking 0 (zero) is possible and in practice negative rankings can be ignored). The following data in Table M2W6P2 shows the correlation between comments, shares, and views - with YouTube rankings of a video.

Use the above information to answer questions 8, 9 and 10.

1 point

Which of the following sets of vectors in  $SS$  have the property that the YouTube video corresponding to every linear combination of that set which is in  $SS$  has ranking 00?

☐

$\{(1, 1, 0), (0, 0, 1)\} \{(1, 1, 0), (0, 0, 1)\}$

☐

$\{(6, 25, 0), (0, 0, 25)\} \{(6, 25, 0), (0, 0, 25)\}$

☐

$\{(25, 6, 0), (0, 0, 25)\} \{(25, 6, 0), (0, 0, 25)\}$

☐

$\{(12, 50, 0), (0, 0, 1)\} \{(12, 50, 0), (0, 0, 1)\}$

☐

$\{(24, 100, 0), (0, 0, 25)\} \{(24, 100, 0), (0, 0, 25)\}$

☐

$\{(6, 0, 0), (0, 25, 0), (0, 0, 1)\} \{(6, 0, 0), (0, 25, 0), (0, 0, 1)\}$
