An earthworm is crawling about on a sunny day. We draw coordinates axes on the ground where it is crawling and find that the body temperature of the earthworm at a point  $(x, y)$  is given by the function:

$$T(x, y) = 2x^2 + 3xy + y^2$$

Use this information to answer questions 8,9, and 10.

☐  $T(x, y)$  is continuous at  $(1, 1)$

☐  $T(x, y)$  is a linear function.

☐  $T(cx, cy) = c T(x, y).$

- ☐ If the earthworm approaches the point  $(1, 2)$  from any direction, then the body temperature of the earthworm approaches 12 units.
